Quality Policy

The Wi-Fi Alliance is devoted to promote the growth of the Wi-Fi market. To that end, the Wi-Fi Alliance will aim to:

1. Enhance the user experience with wireless devices based on the IEEE 802.11 specification through a certification program
2. Maintain a Quality System, detailed in a Quality Manual, which outlines the Wi-Fi Alliance approach to quality in its certification program operations
3. Execute certification program policies and requirements in a manner that is uniform and fair

This policy is endorsed by the Board of Directors and Senior Management, and it is available to employees, members, and other interested parties upon request.
